Proper Methods of Application

Step 1
1. Switch on the power. When a Tick occurs, it means the power is normal.
2. Gently press " " button, and the machine is starting up.
3. All the functions will displayed on the LCD screen for 3 seconds. The running time of the machine is set to 15 minutes automatically, and the initial default temperature is 20°C/68°F.

Step 2
1. You can choose " " and " " to set temperature (The Celsius temperature set is 20-55°C and Fahrenheit temperature is 68-131°F).
2. Press " " button for one time, the set temperature will increase 5°C/9°F, and press " " button for one time, the set temperature will decrease 5°C/9°F.

Step 3
1. You can choose " " and " " to set time.
2. Press " " for one time, the set time will be increased 1 minute for each press. If the " " button is pressed without release, the time will be increased 5 minutes for each time, and the highest time for set is 60 minutes. Press " " for one time, the time will be decreased 1 minute. If press " " without release, the time will be decreased 5 minutes for each time. When the set time matures, the controller will break the power automatically.

Step 4
1. When " " appears in the LCD screen, it is the condition of heating; otherwise, it is the condition of cooling.
2. The controller is locked automatically after set completed of 5 seconds, and " " will appear on the display. Press any of the button of the time or temperature for 1 second, the controller can be unlocked and the " " appear on the display.
